

## Cruzmail

Cruzmail is a web app designed to improve communication between the ucsc package team (is that what its called?) and the recipients of the packages. Its main feature is to allow for students and faculty to track the status of their package. If the package has been delivered, it will display where the package was dropped off and what time it arrived. Our web app also allows employees to easily update the status of packages and other information such as mailstops.

### Home

This is the page that customers will see. They will be able to track their packages by inputting a tracking number. The login button is for employees and allows them access to the other pages.

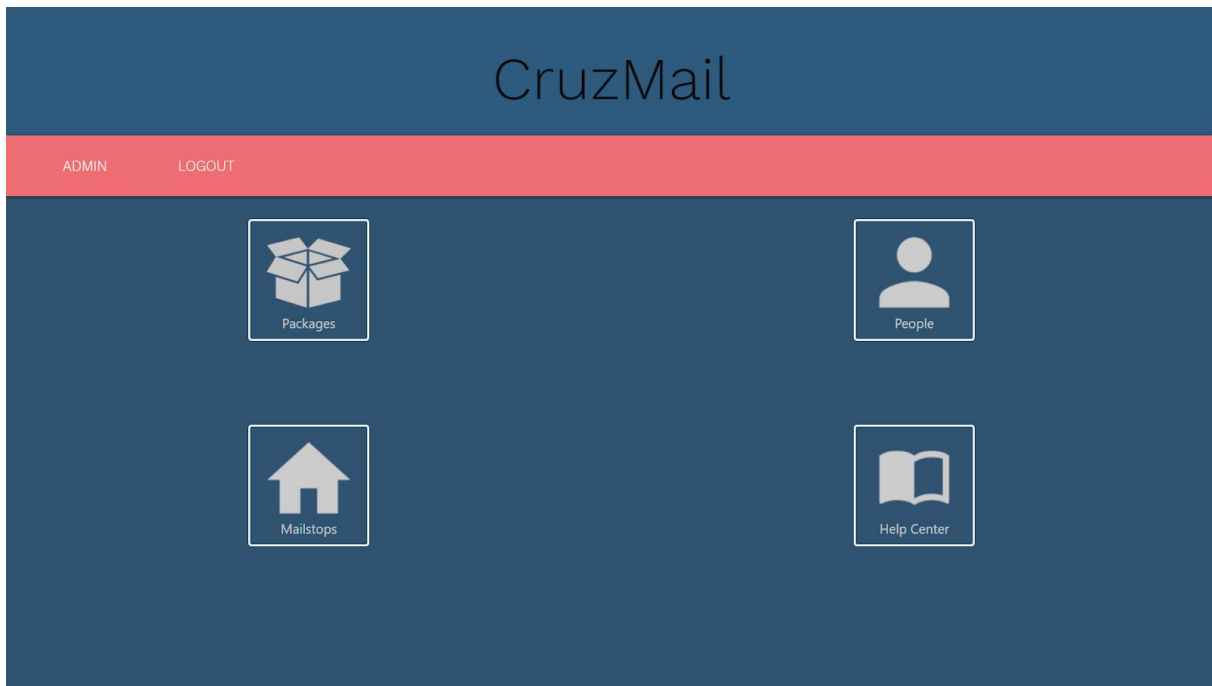

The screenshot shows a web browser window with the CruzMail application. The browser's address bar shows the URL `127.0.0.1:8080/?search=ipi&submit=Search`. The application has a dark blue header with the "CruzMail" logo on the left and a "LOG IN" link on the right. Below the header is a white search bar with the placeholder text "ENTER YOUR TRACKING NUMBER :)" and a red "Search" button. The main content area is a white box containing four sections, each with a label and a text input field:

- STATUS:** The input field contains the text "delivered".
- TRACKING NUMBER:** The input field contains the text "01923871209".
- DESTINATION:** The input field contains the text "not on campus".
- LAST LOCATION:** The input field contains the text "Delivered".

## Menu

Once an employee has signed in, they will be redirected to this page. Packages, Mailstops, People, and Help Center are accessible by everyone. The admin page, however, is restricted to only accounts with the right access privileges.

## Users (Admin)

This page is that the admin button redirects to. It allows for the user to add accounts and delete accounts. Because only employees need accounts and the accounts can modify the database, adding and delete accounts is restricted to only specific accounts.

## Packages

This page is where employees will be updating information on packages. They can choose to add packages. They can also search for packages by mailstops. If they want to mark a package as delivered, they can check the checkbox on the package and click the deliver package button.
